Email info.whitecity@allweatherwood.com

The White City, Oregon manufacturing plant is Allweather Wood's largest capacity plant. This plant has an extremely diverse preserved wood product line of building code-approved products in stock. The species mix is Hem fir, Douglas fir, and Lodgepole pine. Pressure treated structural framing lumber, timbers, plywood, and posts are all available for prompt shipment. Assorted items including decking, fencing, stakes, tile batts, poles, and other specialty items are also available on a special order basis. This location specializes in #1 grade of Douglas fir timbers. Fire retardant products are in stock, too. Currently Borate and NatureWood preservatives are used. If, after reviewing the product list, you have questions or cannot find a particular product, contact us via email or by telephone.

The NatureWood® lumber preservative is a waterborne, alkaline copper quaternary preservative system developed to provide long-term protection of wood exposed in exterior applications. The NatureWood® system is based on the well-established effectiveness of copper combined with an organic quaternary compound and is applied to wood by pressure treatment. NatureWood® treated wood products are available for above ground, ground contact and fresh water contact applications for projects such as decks, fences and landscaping. NatureWood products meet the American Wood Preservers' Association Standards and are building code approved. Be sure to recommend the proper fasteners and connectors when NatureWood products are used.

Advance Guard® Borate Pressure Treated Wood Products have long-term protection that is a step in quality construction. Builders can depend on Advance Guard products to set them apart from their competitors and to provide to their customers what pre-existing homes can never provide—long lasting, built-in protection against termites, including Formosan termites, fungal decay and many other wood destroying organisms. An additional benefit is that walls built with borate pressure treated wood limit populations of cockroaches and ants that may live in the wall systems.

Advance Guard® Borate Pressure Treated Lumber is recommended for sill plate, furring strips, joists, studs, roof trusses, blocking, rafters, beams, and other framing applications. Advance Guard® Borate Pressure Treated Lumber is also recommended for fascia, trim, and miscellaneous wood applications, when properly protected from the weather.

Advance Guard (Borate) UC2 Incised
